

DUOS ASINOS  
consulting

Java Developer

## About the project

We are **Duos Asinos**, a growing company founded and based in **Belgrade**. Our **partner** is a **rapidly-expanding North American**, innovative, worldwide renowned **front-runner in its industry, with a large user base**.

The project is a **dating platform** with about **100 million** users of which about **40 million** are **active daily**. The user base is spread across native mobile and web applications (built with PHP and React), with **Java microservices being the core of the platform**, handling the **most important tasks**.

At Duos Asinos we like **working from home** and usually meet at the office only when there's some **food and drinks!** We're **not fans of meetings**, so we try to keep them to a **minimum** (just the ceremonial stuff) and it's **not important when you work**, as long as the **deadlines are met**.

Our teams follow the **SAFe methodology** where **each team has members for every stack** (iOS, Android, Java, PHP, React, etc), so when you're working on a feature your team is the only one working on it.

We're in the process of **modernizing the whole platform**, so we **promote innovation** and initiatives to fix or improve the code.

*Sounds good? Keep on reading* 

# A little about the benefits

## So, what do we bring to the table?

### Well...

- ✦ We make a **clear distinction** between **company** and **personal time**
- ✦ Aside from a few die-hards, **most** of us **work** and **will continue working from home**
- ✦ **Adaptable work hours and days** (a four-day work week is optional)
- ✦ Experienced colleagues who are willing to impart their knowledge
- ✦ Access to additional educational materials and courses

### And...

- ✦ **Private health care**
- ✦ Generous and **flexible off-days**
- ✦ **Paid sick leave**
- ✦ MacBook Pro & other equipment
- ✦ Social events
- ✦ **Support for new parents**
- ✦ Opportunity to apply your skills and learn new ones

These pictures were taken at our recent social event at Restoran Reka  
We wrote about it on [LinkedIn](#)

# And a little about the responsibilities

As **Senior Java Developer**, you would be responsible for **implementing new** and **maintaining** existing **microservices**, used by our mobile and web applications for payments, authentication, content encryption and decryption.

The microservices were built using **Spring Boot/Spring Cloud frameworks**, using **SAFe methodologies** and processes. **Additional tasks** can include planning, collaboration, and implementation of **data migration** from the existing platforms **to the new microservices** based platforms.

## Requirements

- ✦ **Minimum 3 years of Java/Scala/Groovy** experience with **strong emphasis** on functional (**Lambda expressions, Streams API**) and **reactive programming** techniques
- ✦ **Minimum 2 years** of experience with **Spring Boot** and **Spring Cloud**
- ✦ Experience with **Redis**
- ✦ Experience with **Spring Data**
- ✦ Experience with **Spring Security**
- ✦ Experience with Streaming Platforms (**Apache Kafka**, Apache Spark etc.)
- ✦ Experience with AWS services and cloud technologies
- ✦ Experience with MySQL, Mongo DB

# Thanks for your time!
