

DUOS ASINOS  
consulting

iOS Developer

# About the project

We are **Duos Asinos**, a growing company founded and based in **Belgrade**. Our **partner** is a **rapidly-expanding North American**, innovative, worldwide renowned **front-runner in its industry, with a large user base**.

The project is a **dating platform** with about **100 million** users of which about **40 million** are **active daily**. The user base is spread across **native iOS, Android** and web applications (built with PHP and React). The iOS application is being actively **rewritten with Swift** and using **Combine framework**. On we're also using **UIKit** and are actively **increasing our unit test coverage**.

At Duos Asinos we like **working from home** and usually meet at the office only when there's some **food and drinks!** We're **not fans of meetings**, so we try to keep them to a **minimum** (just the ceremonial stuff) and it's **not important when you work**, as long as the **deadlines are met**.

Our teams follow the **SAFe methodology** where **each team has members for every stack** (iOS, Android, Java, PHP, React, etc), so when you're working on a feature your team is the only one working on it.

We're in the process of **modernizing the whole platform**, so we **promote innovation** and initiatives to fix or improve the code.

*Sounds good? Keep on reading* 

# A little about the benefits

## So, what do we bring to the table?

### Well...

- ✦ We make a **clear distinction** between **company** and **personal time**
- ✦ Aside from a few die-hards, **most of us work** and **will continue working from home**
- ✦ **Adaptable work hours and days** (a four-day work week is optional)
- ✦ Experienced colleagues who are willing to impart their knowledge
- ✦ Access to additional educational materials and courses

### And...

- ✦ **Private health care**
- ✦ Generous and **flexible off-days**
- ✦ **Paid sick leave**
- ✦ MacBook Pro (M2) & **400 EUR budget for peripherals**
- ✦ Social events
- ✦ **Support for new parents**
- ✦ Opportunity to apply your skills and learn new ones

These pictures were taken at our recent social event at Restoran Reka  
We wrote about it on [LinkedIn](#)

# And a little about the responsibilities

As **iOS Developer**, you would be responsible for developing new and expanding existing features within the iOS applications, used by tens of millions of users and helping the team complete the **move to Swift** and **Swift UI**.

There are 4-5 iOS applications, one for each product, they were originally built in Objective C, but we are **transitioning to Swift** (~70% of codebase was moved to Swift), so we consider **Objective C to be legacy code**. The applications are also using **UI Kit** but we're switching to **Swift UI** and we're using the **Combine** framework.

## Requirements

- ✦ Minimum **3 years** of professional experience in **iOS development**
- ✦ Development of clean and efficient code
- ✦ Experience with **Combine**
- ✦ Experience with UIKit and Swift UI
- ✦ Experience with **writing Unit tests**
- ✦ Experience with **integrating external APIs** (like backends and other services)
- ✦ Experience in conducting **code reviews**
- ✦ Understanding of **User Experience (UX)** concepts

# Thanks for your time!
