We are **Duos Asinos**, a growing company founded and based in **Belgrade**. Our **partner** is a **rapidly-expanding North American**, innovative, worldwide renowned **front-runner in its industry, with a large user base.**

🚀 Our team is growing, and **we want you** to **join us!**

As **DevOps Engineer**, you would part of a 5-person team that's responsible for managing the infrastructure used by 40 million users every week! The team is split into two groups, **Coding and Infra.** Depending on what your preferences and strengths are, you would either be part of the Coding group or the Infra group. The platform is hosted on **AWS** and we use services like **EC2, EKS, RDS, S3,** etc.

The **Coding group** manages all **IaC** (Terraform), all **Ansible scripts** and **Jenkins pipelines**. The platform is about 70-80% **IaC** and this group's task is to get it to 100%.

The **Infra group** manages most of the other infrastructure, like **Kubernetes clusters** that are being moved from **EC2 to EKS**, containerizing new applications, managing Load balancers**, managing API Gateways** and ensuring all traffic is flowing smoothly.

💥 **Why** work for **us**?

- We make a **clear distinction** between **company** and **personal time**
- Aside from a few die-hards, **most** of us **work** and **will continue working from home**
- **Adaptable** work **hours and days** (a four-day work week is optional)
- Experienced colleagues who are willing to impart their knowledge
- Access to additional educational materials and courses

💰 **What else we're offering:**

- **Private health care**
- Generous and flexible off-days
- **Paid sick leave**
- MacBook Pro & other equipment
- Social events
- **Support for new parents**
- Opportunity to apply your skills and learn new ones

🔍 What **we're looking for:**

- Proven experience with **Linux administration: troubleshooting, networking, security**
- Proven experience with **infrastructure as Code: Terraform and Ansible**
- Proven experience with **microservice architecture**
- Version control experience with **Git**
- Experience with coding in **Bash** and **Python**
- Proven experience with **Containerization and Orchestration: Docker and Kubernetes**
- Proven experience with cloud services: **AWS** and its services like **EC2, RDS, elastiache, EKS**
- Proven experience with **CI/CD** tools like **Jenkins**
- Experience with monitoring platforms like **Dynatrace/New Relic, ELK Stack, Prometheus**
- Experience with **API** and web troubleshooting

👍 Not a must, but **cool if you have it:**

- Experience with **Hashicorp tools: Vault and Consul**
- Experience with distributed streaming platform: **Confluent Kafka**
- Experience with deploying **Java/Spring and Node.js/React applications**
- Experience with any other programming languages
- Experience in **Agile-managed development** projects
- Awareness of IT companies' Compliance and Security requirements

💬 What's our selection process like?

First, we set up an introductory meeting, where we introduce you to Duos Asinos, project specifics, and hopefully, hear a bit about you. The next step would be a technical interview with the team lead. Afterward, you'll get an official offer from us, if both sides agree, we sign the contract for an indefinite period, and boom, we're done!

🤝 Sounds good?

If you're interested in this position, please send us your CV to **resumes@duosasinos.com** or apply over LinkedIn Jobs, either works.

Only shortlisted candidates will be contacted.
